Start your journey into the human body with cells, bones and muscles. Our resource takes you through a fascinating study of anatomy with current information. Begin with cells, the building blocks of life. Build your own cell by sculpting the different parts. Move into tissues, organs and systems to discover all the different systems that make the human body function. Next is the skeletal system. Invent your own alien skeleton using the different bones found in the human body. Understand that these bones are held together with joints and cartilage. Finally, end this part of the journey with the muscular system. Find out the difference between skeletal, smooth and cardiac muscles before identifying voluntary and involuntary muscle movement. Aligned to the Next Generation State Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.

Volume One, The Musculoskeletal System, opens with the building blocks of your body!The cells. Your body is built from many kinds of cells and tissues, and you will learn how they work. Even the bones and muscles that give you strength and speed depend on many types of cells. This book will: Show you the ins and outs of the bones in your skeleton and how they functionGive detail as to how your marvelous muscles move youProvide a detailed glossary in the back for quick reference! Throughout the book you will learn things to do to keep your body healthy. But in a fallen, cursed world things are bound to go wrong. We will look at what happens when disease or injury affects bones and muscles. Volume Two, Cardiovascular and Respiratory Systems. From the level of the cell to the organs themselves, we will examine these systems in depth. Here you will learn: The incredible design of the human heart and how it is really two pumps in one!How blood moves through an incredible network of arteries and veins!What blood pressure!s and the marvelous systems that help regulate it!How the respiratory system allows us to get the 'bad air out' and the 'good air in. Along the way, we will see what happens when things go wrong. We will also suggest things to do to keep the heart and lungs healthy. Although the world insists that our bodies are merely the result of time and chance, as you examine the human body closely, you will see that it cannot be an accident. It can only be the product of a Master Designer.
