Cape Town's iconic
Table Mountain and the
surrounding peninsula
has been a crucible for
attempts to integrate the
social and ecological
dimensions of wild fire.
This environmental

history of humans and
wildfire outlines these
interactions from the
practices of Khoikhoi
herders to the
conflagrations of
January 2000. The
region's unique,
famously diverse fynbos
vegetation has been
transformed since
European colonial
settlement, through
urbanisation and

Get Free City Of Cape Town

biological modifications, both intentional (forestry) and unintentional (biological invasions). In all the diverse visions people have formed for Table Mountain, aesthetic and utilitarian, fire has been regarded as a central problem. This book shows how scientific understandings of fire in fynbos developed slowly

in the face of strong
prejudices. Human
impacts were intensified
in the twentieth century,
which provides the
temporal focus for the
book. The disjunctures
between popular
perception, expert

management are
explored, and the book
supplements existing

Assumptions of inability
and the perceived costs
of employing disabled
persons are two of the
primary reasons why it
has been impossible or
difficult for many
capable disabled persons
to access work and to

continue working. This book considers the South African legal framework that seeks to promote such access and critiques it with particular reference to the intersections of the rights to equality and access to social security. One of the primary arguments is the need for a more active conception of social

security in which access to work for disabled persons is recognised as an integral component of promoting both social security and substantive equality.

Climate change impacts are scale and context specific, and cities are likely to bear some of

the greatest costs. In recent years cities have begun to craft their own climate change responses against the backdrop of the reluctance displayed by nation-states in committing to emissions reductions and managing the consequences of climate change. Climate

Scale presents a fresh contribution to climate change literature, which has largely neglected the role of cities in spite of their increasingly important role in the global economy. The book focuses on the impacts of climate change in the rapidly evolving city of Cape Town, and captures the experiences of the Cape

In 2000 United Nations adopted the Millennium Development Goals (UN MDGs), committing the member nations to a new global partnership to reduce extreme poverty and setting out a series of

specific targets with a
deadline of 2015.
Related to the UN
MDGs, tourism is
increasingly seen as a
promising tool for
poverty reduction,
ensuring environmental
sustainability and
developing a global
partnership for
development, for
example. Thus, the
industry has become an

important policy tool for
community and regional
development in many
developing countries
and the expectations for
tourism and its social
and economic outcomes
have evolved to a high
level. However, there
are still many challenges
to overcome in the
relationship between
tourism industry,
development and

poverty reduction. This book aims to discuss the promises, challenges and outcomes of tourism in development with a specific aim of drawing together research related to tourism and UN MDGs. The papers discuss what lessons can be learnt and conclusions drawn from the utilisation of tourism for development and

poverty reduction. What emerges from this collection is a set of interesting results and notions which both support and challenge the connections between tourism and development and the new role of tourism in global development. This book is an extended version of a special issue published

This volume examines the design and impact of courts in African federal systems from a comparative perspective. Recent developments indicate that the previously stymied idea of federalism is now being revived in the

constitutional
arrangements of several
African countries. A
number of them jumped
on the bandwagon of
federalism in the early
1990s because it came
to be seen as a means to
facilitate development,
to counter the
concentration of power
in a single governmental
actor and to manage
communal tensions. An

important part of the
move towards
federalism is the
establishment of courts
that are empowered to
umpire
intergovernmental
disputes. This edited
volume brings together
contributions that first
discuss questions of
design by focusing, in
particular, on the
organization of the

judiciary and the appointment of judges in African federal systems. They then examine whether courts have had a rather centralizing or decentralizing impact on the operation of African federal systems. The book will be of interest to researchers and policy-makers in the areas of comparative

comparative politics.
