A Dissection Guide & Atlas to the Fetal Pig, 3rd Ed. by David G. Smith and Michael P. Schenk is designed to provide students with a comprehensive introduction to the anatomy of the fetal pig. This full-color dissection guide and atlas gives the student carefully worded directions for learning basic mammalian anatomy through the use of a fetal pig specimen.

This laboratory manual is ideal for introductory, two-semester anatomy and physiology students. This new edition works well with any textbook and includes complete explanations of essential information. Clear, step-by-step procedures for each exercise are accompanied by detailed illustrations and labeling exercises. The main dissection specimen is the fetal pig.

This full-color, comprehensive, affordable introductory biology manual is appropriate for both majors and nonmajors laboratory courses. All general biology topics are covered extensively, and the manual is designed to be used with a minimum of outside reference material. The activities emphasize the unity of all living things and the evolutionary forces that have resulted in, and continue to act on, the diversity that we see around us today.

Careful step-by-step explanations, helpful diagrams and illustrations, and detailed discussions of the structure and function of each system make this an optimal laboratory resource. How does language comprise the implicit or explicit curriculum of teaching and learning in multicultural science settings? Building on a growing interest in the ways in which language and literacy practices interact with science teaching and learning to facilitate or obstruct successful student outcomes, this book contributes to scholarship on the role of language in developing classroom scientific communities of practice, expands that work by highlighting the challenges faced specifically by ethnic- and linguistic-"minority" students and their teachers in joining those communities, and showcases exemplary teaching and research initiatives for helping to meet these challenges. Offering teacher practitioners and researchers in the fields of science education and multicultural education lenses through which they can critically consider the myriad of classroom settings, instructional approaches, curricular materials, and scientific topics involved in what it means to teach science while pointedly addressing concerns about equity of educational opportunity, this volume serves as a powerful resource for linking theory and practice. End-of-chapter reflection questions and engagement activities facilitate discussion round these issues and provide rich opportunities for the reader to consider the implications of each chapter for science instruction and research and to apply insights developed in a real-world science teaching and learning contexts.
