International Conference on Industrial Engineering (ICIE), held in Sochi, Russia, in May 2021. The authors are experts in various fields of engineering, and all papers have been carefully reviewed. Given its scope, the book will be of interest to a wide readership, including mechanical and production engineers, lecturers in engineering disciplines, and engineering graduates.

The Second Edition of this book includes a revision and an extension of its former version. The book is divided into three parts, namely: Introduction, The Aircraft, and Air Transportation, Airports, and Air Navigation. It also incorporates an appendix with somehow advanced mathematics and computer based exercises. The

first part is divided in two chapters in which the student must achieve to understand the basic elements of atmospheric flight (ISA and planetary references) and the technology that apply to the aerospace sector, in particular with a specific comprehension of the elements of an aircraft. The second part focuses on the aircraft and it is divided in five chapters that introduce the student to aircraft aerodynamics (fluid mechanics, airfoils, wings, high-lift devices), aircraft materials and structures, aircraft propulsion, aircraft instruments and systems, and atmospheric flight mechanics (performances and stability and control). The third part is devoted to understand the global air transport system (covering both regulatory and economical frameworks), the airports, and the global air navigation system (its history, current status, and future development). The theoretical contents are illustrated with figures

and complemented with some problems/exercises. The course is complemented by a practical approach. Students should be able to apply theoretical knowledge to solve practical cases using academic (but also industrial) software, such as Python and XFLR5. The course also includes a series of assignments to be completed individually or in groups. These tasks comprise an oral presentation, technical reports, scientific papers, problems, etc. The course is supplemented by scientific and industrial seminars, recommended readings, and a visit to an institution or industry related to the study and of interest to the students. All this documentation is not explicitly in the book but can be accessed online at the book's website [www.aerospaceengineering.es](http://www.aerospaceengineering.es). The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely

to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

Of the billions of dollars spent on plant management and operation annually, an estimated 80% of the total amount is spent to rectify the chronic failure of systems, machines, and humans. Although information on human reliability, error, and human factors in engineering maintenance is scattered throughout journals and proceedings, no single resource covers all of these topics within a maintenance safety framework. Consulting different and diverse

sources can not only make finding information laborious and time consuming, but also cause delays on the job. Human Reliability, Error, and Human Factors in Engineering Maintenance with Reference to Aviation and Power Generation provides engineers a tool for meeting the increasing problem of human error. Drawing on a myriad of sources, the book provides quick and easy access to information that can then be immediately applied to actual problems in the field. It includes examples and their solutions to illustrate engineering safety management at work and gives readers a view of the intensity of developments in the area. The author's clear, concise, user-friendly style breaks the information down into understandable and applicable concepts. This book not only provides up-to-date coverage of the on-going efforts in human reliability, error, and human factors in engineering maintenance, but

also covers useful developments in the general areas of human factors, reliability, and error. This information can then be translated into increased maintenance safety that has a positive impact on the bottom line.

This book constitutes the proceedings of the 7th International Conference on Biomimetic and Biohybrid Systems, Living Machines 2018, held in Paris, France, in July 2018. The 40 full and 18 short papers presented in this volume were carefully reviewed and selected from 60 submissions. The theme of the conference targeted at the intersection of research on novel life-like technologies inspired by the scientific investigation of biological systems, biomimetics, and research that seeks to interface biological and artificial systems to create biohybrid systems.
