The nanomat material was prepregged at 210 °F with 100 psi for all nips and with a sled speed of 5 fpm. The resulting material was flexible and had a small amount of tack. The color of the material was consistently black and showed no sign of significant imperfections. Cytec reported that, overall, this material was relatively easy to prepreg. Impregnation trials were performed using handsheets and laminates that were cocured to a glass fabric using Cytec 5240-4 BMI resin film.
